

Government Capability Statement

Positioning

EHUB Bharat is positioned as an integrated EV charging infrastructure and EV charger manufacturing partner for governments, public-sector organizations and institutions.

The public delivery narrative is Plan - Manufacture - Deploy - Operate.

Government project support

Planning support may include demand assessment, location planning, site readiness, electrical feasibility, charger-mix planning, DPR support, commercial model review and phased implementation planning.

Deployment support may include project design, civil and electrical coordination, charger installation, software onboarding, testing, commissioning, signage, handover documentation and operations planning.

Manufacturing facility

EHUB Bharat presents its own EV charger manufacturing facility at: Sy. No. 6E, Dharmojigudem-Dothigudem Road, H/o Lakkaram Village, Choutuppal Mandal, Yadadri Bhuvanagiri District - 508252, Telangana, India.

Published product and manufacturing claims are limited to verified categories and process descriptions until approved datasheets, test records, certifications and capacity documents are available.

Government use cases

State and city charging networks, highway corridors, government fleet electrification, electric-bus and depot charging, government buildings, public parking, smart-city assets, tourism destinations, hospitals, universities and public-sector campuses.

Next action

Request an executive briefing, invite EHUB Bharat to an EOI or RFP, request a manufacturing review or schedule a factory-visit discussion through the Government Project Desk.

Disclaimer: Documents, technical specifications, commercial models and project timelines are subject to formal review, site feasibility and the applicable procurement process.
