

Government Project Summary

Project approach

EHUB Bharat can support public EV charging projects through stakeholder consultation, demand and location mapping, land and power feasibility, DPR support, procurement or PPP structuring, manufacturing and supply, deployment, software integration, commissioning, O&M; and phased expansion.

Commercial pathways

Potential models include government-funded CAPEX, EPC, EPC plus O&M;, PPP, concession, revenue sharing, site lease, managed charging service and fleet charging service. Availability depends on project feasibility and formal commercial review.

Governance

Recommended project records include milestone logs, responsibility matrix, site documentation, commissioning records, SLA reporting where contracted, uptime and incident reporting, energy reporting, revenue reconciliation, asset lifecycle records and periodic government reports.
